

## Background

- City Council advocates the use of renewable energy sources or similar actions where appropriate and feasible.
- This presentation is to give an update following the July 28, 2025 presentation to City Council. This item is to update City Council on next steps and have further discussion.

## **Discussion**

- 1. The City will look at installing some version of solar power at the Shallowford Annex and the Arts Center / Library locations, along with incorporating solar power into new construction.
- 2. The City will focus on financing where there is little to no up-front investment where the company installs the solar equipment and the City purchases the electricity from them based off usage or at a fixed rate. The Sustainability Committee recommends SEPA or solar lease.
- 3. The City would develop an RFP for such services to competitively procure them. Goal is to have the RFP on the street by October 31. Approval by City Council in January 2026. Construction finished by June 30, 2026.
